ABSTRACT OF THE DISCLOSURE

For facilitating and making more efficient the setting of the operating parameters of a bonding tool that is used to form a wire loop into a desired shape, when an editing handle is dragged, the loop shape of a wire loop line drawing displayed on a display screen is redrawn as a secondary loop line drawing. The values of the operating parameters corresponding to the loop shape of the drawn or redrawn secondary loop line drawing are calculated, and the results are displayed in a parameter list.
